

## **AMENDMENT(S) TO THE SPECIFICATION**

**Please replace the paragraph beginning at page 8, line 6, which was previously amended in an Amendment dated August 1, 2003, with the following rewritten paragraph:**

Similarly, a further similar embodiment variant of the pocket knife as shown in Fig. 2 is illustrated in Fig. 8b, similar in that here a cover [[plate]] 73 can be plugged onto a pocket knife 71 by means of pins 76 and corresponding recesses 75. It is, thereby, for instance possible that the pins 76 can be depressed such that the cover [[plate]] can easily be removed from the pocket knife 71. Again, a display 77 can be recognized and now, different from the embodiment in Fig. 8a, an infrared emitter 79 is provided in order to for instance transmit data by means of infrared or other suitable wireless transmitting techniques to a data storing or evaluating medium, such as for instance a PC. Finally recognizable is a menu selecting switch device 78 in order to switch between different measuring and display menus. It is not necessary to enter further into the functioning of the pocket knife illustrated in Fig. 8b because it is analogous to the functioning of the tool illustrated in Fig. 8a. It shall be mentioned merely that the connection interface for performing a data logger function foreseen in Fig. 8a allows a wireless transmitting of data such as for instance inductively, without any visible contacts, capacitatively or purely telemetrically i.e. via a wireless frequency. Obviously it is also possible to arrange at the cover plate, such as by the way also integrally at the pocket knife itself, an antenna which can be plugged in or screwed on in order to transmit data.
